## Self-Locking Feed Fronts (Head Gates, 'Headlocks')

DairyPRO offers self-locking feed fronts to help reduce labour while managing your herd more efficiently.

- Self-locking feed fronts are a very efficient time saving means of humanely restraining cattle individually or in large groups for the purpose of breeding, treatment, sorting or milking.
- With automatic group, self-locks allow cows to eat their rations while waiting for treatment.
- Designed with durability in mind, DairyPRO designed self-locks are built with heavier components, continuous welds, and stronger bushings to ensure durability and long life.

### Self-Locking Feed Fronts for Youngstock

- Starting with our young stock self locks at a young age ensures that when it comes time for breeding, your herd is comfortable being restrained at the feed bunk.
- All young stock self lockers have been specifically designed for younger animals and comes with the standard features found on all our self lock systems.
