

Rubber Dairy Cow Mats

Comfort and Safety to Increase Dairy Performance

- Rubber mats are designed to provide cows with a cleaner, more sanitary and comfortable environment. Cows forced to lie on bare concrete will underperform in milk output, milk quality and udder health!
- The specially-designed density of our dairy cow mats provide orthopedic support that reduces potential joint deterioration that is caused by standing and lying on hard and slippery stalls and floors.
- Cow mats reduce the amount of bedding needed for stalls. Less bedding means lower costs; less time spent handling, spreading, and removing bedding.
- Rubber cow mats are easy to clean and resistant to the acid-based chemicals used to eliminate bacteria and fight infections.
- Using cow mats helps give cows better and longer resting periods, which can increase the quantity of milk produced!
- Available in both straight edge for single cubicles and interlock edge to join mats for covering pens and walking areas.

Easy to Install on concrete floors & cubicles

1. Lay down the mat on concrete surface
2. Secure using 8-10 nails and washers per mat.

Specifications:

Size of straight edge:	122cmx183cm
Thickness:	19mm
Surface:	Non-Skid design (Honeycomb or Diamond)
Underside:	Grooved
